

Start the program

Initialize char var donorName with a limit of 25 char

Print name and take input for name via scanf

Store it in donorName

Initialize int var donorAge

Print Age and take input for age via scanf

Store it in donorAge

Initialize int var donorWeight

Print Weight and take input for weight via scanf

Store it in donorWeight

Initialize float var donorHemoglobinLevel

Print Hemoglobinlevel and take input for it via scanf

Store it in donorHemoglobinLevel

Now

Compare it via

if

((donorAge >= 18 && donorAge <= 60) && donorWeight >= 50 &&

donorHemoglobinLevel >= 12.5)

When this is true If block executes and when false else block executes

Then print

Blood Donation Status

Donor Name: XYZ

Eligibility : Eligible for blood donation

Else

Then print

Blood donation status

Donor Name: XYZ

Eligibility : not eligible for bood donation

program ends via return 0
